- High

### Annexes
- Annex 1: Strategic performance report – October data
1. **Introduction**

1.1. The attached paper summarises the main performance indicators, following discussion by the Corporate Management Group (CMG) at its mid-December performance meeting.

1.2. Most of the data relates to the position at the end of October 2015. The delivery totaliser, however, reflects the position at the end of December.

1.3. The IFQ milestones in the totaliser have been significantly updated to reflect the latest agile planning decisions, made in December at the commencement of the beta phase. This has resulted in additional milestones being added to the calendar of future deliverables (on which the totaliser diagram is based), mainly at the key points of March, July and October 2016.

1.4. An update on the financial position at the end of quarter three (ie, at the end of December 2015) will be given verbally at the meeting.

1.5. Overall performance is good, and we are making solid progress towards our strategic aims.

2. **Recommendation**

2.1. The Authority is asked to note the latest strategic performance report.
1. Summary section

Dashboard – October data

Strategic delivery totaliser
(see overleaf for more detail)

Setting standards:
critical and major recommendations on inspection

Increasing and informing choice:
public enquiries received (email)

Overall performance - all indicators:
Efficiency, economy and value:  Budget status: cumulative surplus/(deficit)

This graph details our overall position as at 30 Sep 2015 (Q2) and our forecast position as at 31 March 2016. The components making up the surplus/deficit are shown by two other graphs (income and expenditure), in the budget status summary in the commentary section below.

(See RAG status section for detail.)
The totaliser data has been significantly updated in December, to add the main features of IfQ delivery during beta phase. The work on beta has already started. There are a large number of key IfQ milestones that will be reached in (particularly) March, July and October of 2016. Owing to the major investment made to date in planning, arriving at various proofs of concept (in the alpha phase), and seeking various approvals, we are now in a position to build products (albeit at risk at the time of writing, since we still await the formal GDS approval). This re-casting of the totaliser data to include more future deliverables has made us appear ‘behind’ on the above graph. However now that real product development has commenced (this is what the beta phase consists of), we should expect to see the delivery line start to converge with the elapsed timeline, from this point onwards.
Strategic delivery for September to December

1. Setting standards
In September, the compliance reports on risk tool alerts and themes, common non-compliances and incidents were all delivered on time to the Authority meeting, focusing on analysing current quality and safety issues in clinics, helping clinics to improve outcomes and reduce risks, and disseminating learning. Our annual publication reporting on clinical incidents (in 2014) was also published, containing information about learning points from incidents and adverse events, to inform both the clinics themselves and our future inspections. A multiple births stakeholder group meeting was also held as planned. We had originally planned to commission an external review of our inspection regime, to report in September, but a decision was taken to defer this work, pending the outcomes of our Triennial Review (which may include relevant recommendations).

In October, we completed the mitochondrial donation project, getting new application and licensing processes in place in time for implementation of the new legislation on 29 October. In addition we collaborated and engaged with others, through our own Licensed Centres Panel meeting and attendance of the AFPO conference held by patient and donor organisations.

2. Increasing and informing choice
Our six-monthly Choose a Fertility Clinic (CaFC) data was published on time in October, providing updated information (up to the end of quarter two of 2015 for pregnancy data) to the public and feedback on performance to the sector.

The annual report on clinical incidents and alerts was also published on time, in November.

3. Efficiency, economy and value
In September, work continued on the IfQ website and clinic portal projects. The alpha phase of work (proofs of concept) was subsequently completed in November, with approval to proceed obtained in principle following a very positive DH assessment. GDS approval was expected in December, but in the event the item will not now be heard by the approval board until January 2016. For the time being we are proceeding with the beta phase at risk, since otherwise we would need to stand down our suppliers and the programme would lose impetus. Detailed beta phase planning has been completed, setting out the products and user stories that will be built and tested in each beta sprint. The Authority continues to receive regular reports on IfQ progress.

In October, our regular fees engagement with clinics took place. This meeting provides accountability and transparency on fee rates to the sector.
Red/amber/green status of performance indicators as at October 2015

The red key performance indicator (KPI) shown in the ‘overall status - performance indicators’ pie chart on the dashboard is as follows:

The number of working days from the day of inspection to the day the draft report is sent to the PR has a target of 90% in 20 working days. In October this indicator was performing at 57% in 20 working days, due to illness and special leave in the inspectorate. However no report was sent later than 28 working days, and the overall indicator for the whole end-to-end licensing process was unaffected, and remains within its KPI.

Several projects are currently rated amber for risk, based mainly on resourcing strains while we also deliver the Information for Quality Programme and a range of other work. It is also worth noting that both turnover and sickness absence are on amber. Our turnover is at 18.5% (compared to a target of 5-15%), while our sick leave was at 2.8% in October, which is unusually high for us. It is worth noting, however, that we recently dropped our KPI from 3% to 2.5%, and have also put some effort into reminding managers to record sickness leave promptly so that we can be certain it is fully recorded in time for the figures each month to be reported.
Budget status – October data

The dashboard shows the overall surplus/deficit position. The graphs below show how the surplus or deficit has arisen. These figures are updated quarterly, approximately one month after the end of each quarter. A verbal update on the position at the end of quarter three will be given at the meeting.

This graph shows our budgeted (planned) licence fee income and grant-in-aid (GIA) compared to what is actually happening.

As of the second quarter of the year (30/9/15) we are not far off our budget (a shortfall of only £49k). We continue to monitor treatment fees as the trend continues to be downward.

This graph is the second component that makes up the surplus/deficit. This excludes costs relating to IfQ, since this is being funded from reserves and accounted for separately.

We are currently under spending against budget (£200k) which is relative to our reduced income. The underspend has been added to by inclusion of receipts of £90k from legal cases where we were awarded costs. Our year end forecast is showing an under spend of £177k. This position will change as more information is known and on-going pieces of work are completed.
The following figures and graphs are drawn from a data run on 2 December 2015.

Graph showing the pregnancy rate over recent years:

Explanatory text: Looking at all IVF treatment forms, and providing a count of pregnancies - as recorded on the early outcome form.

As agreed previously, the following items are most meaningful when reported on an annual basis. The following items will continue to be presented to the Authority each year in September:

- number of risk tool alerts (and themes)
- common non-compliances (by type)
- incidents report (and themes).
2. Indicator section

Commentary: Summarised management accounts October 2015 – commentary

Income

Treatment fee income improved slightly up to the end of October with the shortfall now approximately 1% less than expected. We continue to keep a close eye on this. The forecast income reflects the earlier shortfall on treatment fees and the unbudgeted legal award made.

Expenditure

Year to date expenditure is almost 10% below budget at the end of October. Legal costs continue to be less than expected at this point in the year and the salary budget is underspent, due to vacancies.

A detailed review of the likely spending for the remainder of the year was conducted after the end of quarter two and the forecast reflects the current expectation. A further review will be conducted in January (post Q3). Before spend on IfQ, we are forecasting overall expenditure to be 3% lower than what we have budgeted.

IfQ and Other Project costs

The pace of spend increased slightly in October (cumulative spend now at £358k compared to budget of £526k) with the year to date underspend reducing to 32%. Likely expenditure for the rest of the year has been reviewed and re-profiled. We expect that £200k (18%) of the total £1,135k will now be spent in 2016/17. We have informed the DH of this development.

</thead>
</table>
| Monthly                   | Risks: sum of risk scores (L x I) | Is overall risk getting worse or better (could identify death by a thousand cuts)? | **October:** Key areas of risk for the Programme remain stable from September. These remain centered on data migration work, in particular regarding decisions about timing for cleansing and migrating ‘must’ and ‘should’ data, and striking an appropriate balance with achieving sufficient quality. These risks are being proactively managed, with IfQ Programme Board reviewing the details of the work in August, and deciding appropriate resourcing and timing parameters for the work in September.

A second key area of risk for the IfQ programme has been determining the delivery and resourcing plan to support the required internal systems work. A key milestone for addressing this area of risk was achieved in September, through finalising the IfQ programme plan.

The overall risk score for the IfQ Programme has increased again, relating primarily to the risk of delayed beta commencement having impacts on key milestones and programme budget. This risk is being managed by IfQ Programme Board, who have agreed to progress to Beta phase at risk in anticipation of expected GDS approval following the already achieved DH approval process.

![Graph showing Inherent Risk Score and Residual Risk Score from April to November 2015.](image)

- **Inherent Risk Score:**
  - Apr-15: 181
  - May-15: 206
  - Jun-15: 198
  - Jul-15: 188
  - Aug-15: 182
  - Sep-15: 144
  - Oct-15: 154
  - Nov-15: 166

- **Residual Risk Score:**
  - Apr-15: 44
  - May-15: 32
  - Jun-15: 35
  - Jul-15: 38
